## Overview

The Merging **Virtual Audio Device Standard edition** is free of charge and intended for owners of a Network Interface hardware RAVENNA or AES67 compatible who wish to work under Mac OS.

The **Virtual Audio Device Premium edition** is bundled free of charge for owners of at least Merging Horus, Hapi or Anubis who wish to work under Mac OS. It requires at least one Merging device to be detected over the network

## Virtual Audio Device driver

Apple's Audio Drivers (Core Audio) is a standardized audio driver system for all Macintosh computers running on Mac OS X allowing access to all Core Audio compatible audio interfaces

## System Requirements

Certified MAC Operating Systems (OS) The Core Audio driver and VAD are qualified under macOS

- Yosemite v10.10.x : RAVENNA -VAD (Core Audio) version 2.0.31254.dmg
- El Capitan v10.11.x : RAVENNA -VAD (Core Audio) version 2.0.31254.dmg
- Sierra 10.12.x : RAVENNA -VAD (Core Audio) version 2.0.31254.dmg >
- High Sierra 10.13.x : RAVENNA -VAD (Core Audio) version 2.0.36877.dmg >
- \*Mojave 10.14.x : RAVENNA -VAD (Core Audio) version 2.0.39648.dmg >  
\* *Beta.*

**Warning: Users updating to Horus-Hapi firmware v3.9.4 and above must install the latest VAD 2.0.39648 or higher.**

## Notes

### Virtual Audio Device Standard edition:

- The latency can be set to 48 (AES 67) samples
- Note: effective latency depends on Application buffer size*
- The driver can be used as default device and System (alert) device.
- Mac Parental Controls and Security Firewall should be switched OFF
- Numbers of inputs and outputs available • 1fs (44.1kHz / 48kHz) = 64 I/O

Note: The number of I/Os could be less if the application does not support these numbers

*Warning: If you encounter issues such as glitches, reduce the IO count, since Performance is dependent on system Performance & Configuration*

Recent Macs could be subject to a potential hardware issue <http://cdm.link/2019/02/apple-2018-glitch/>

### Virtual Audio Device Premium edition:

- Requires at least one Merging Network Interface Hardware (Horus, Hapi or Anubis) on your network
- Anubis is supported as of VAD 2.0.39648 and higher

- The latency can be set to 6\*, 12\*, 16, 32, 48 (AES 67), 64, 128 or 256 samples

*Note: effective latency depends on Application buffer size*

*\* with version above 2.0.37746.dmg*

- The driver can be used as default device and System (alert) device.
- Mac Parental Controls and Security Firewall should be switched OFF
- Numbers of inputs and outputs available 128 I/O at all sampling rates

**Note:** The number of I/Os could be less if the application does not support these numbers

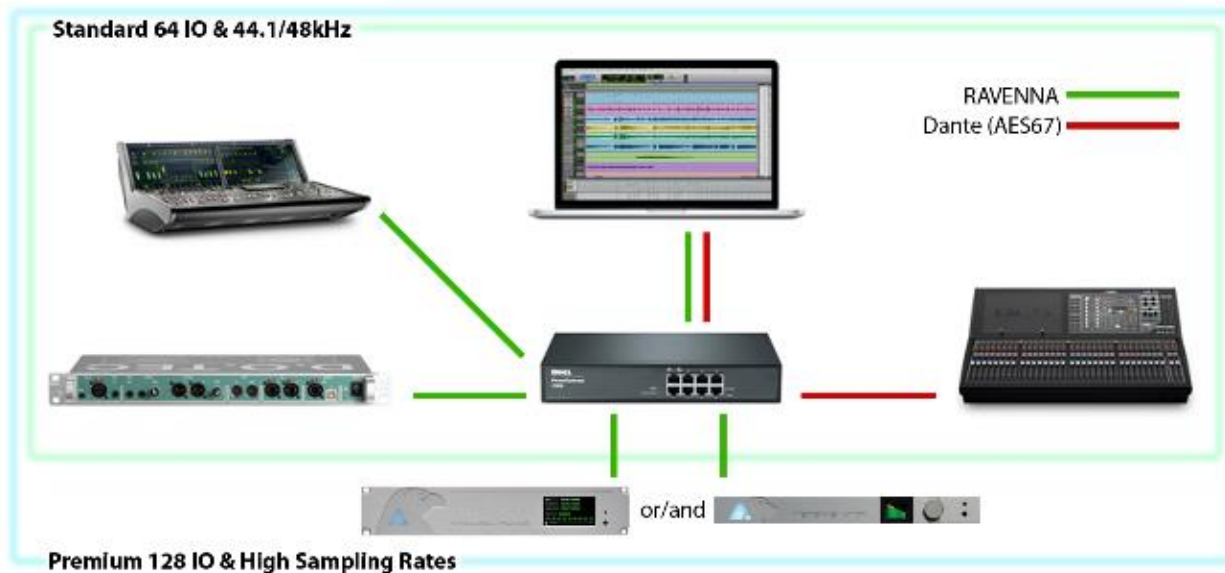

*Warning: If you encounter issues such as glitches, reduce the IO count, since Performance is dependent on system Performance & Configuration*

**RAVENNA/AES67<sup>1</sup> Virtual Audio Device Specifications:**

Driver	RAVENNA/AES67 <sup>1</sup> Virtual Audio Device	
	STANDARD Edition	PREMIUM Edition
Requirements	Any AES67 compatible device	Requires at least one Merging Network Interface connected over the network (e.g. Horus, Hapi or Anubis)
Operating System MAC OS	Yosemite* 10.10.X - ElCapitan* 10.11.X - macOS Sierra 10.12.X - High Sierra** 10.13.X - Mojave 10.14.X***	
Latency	48 (AES67) samples only	16- 32 - 48 (AES67) - 64 -128 - 256* samples
Sampling rate supported	44.1/48kHz	44.1/48kHz, 88.2/96kHz, 352.8/384khz, DSD64, DSD128, DSD256
I/O @ 44.1/48kHz	64 Inputs and Outputs <sup>2</sup>	128 Inputs and Outputs <sup>2</sup>
I/O @ 88.2/96kHz	Not Available	128 Inputs and Outputs <sup>2</sup>
I/O @ 176.4/192kHz	Not Available	128 Inputs and Outputs <sup>2</sup>
I/O @ 352.8/384kHz/DSD	Not Available	128 Inputs and Outputs <sup>2</sup>
MIDI Pre Amps	Not Available	MIDI Pre Amps & Din support
Bundled application	MT Discovery	MT Discovery
<sup>1</sup> SAP implemented in device so no need for a RAVENNA-2-SAP (SIP is not supported)		
<sup>2</sup> The I/O performance will vary with the system configuration.		
* Yosemite and ElCapitan has been certified under VAD version 2.0.31254.dmg and do not support MERGING+ANUBIS		
** High Sierra has been certified under VAD version 2.0.37039.dmg and higher		
*** Mojave supported up to 10.14.4 and requires VAD 2.0.39648 and higher. <b>Warning: upcoming Mojave 10.14.5 is not supported. Remain on v10.14.4 or prior.</b>		
MERGING+ANUBIS is supported as of VAD version 2.0.37039.dmg and higher		
ANEMAN comes as a separate installer and should be installer along the VAD. Download <a href="http://www.aneman.net/#download">www.aneman.net/#download</a> MERGING+ANUBIS users must use ANEMAN v1.1.7 and higher		

**STANDARD version:** Free with any RAVENNA/AES67 Hardware compatible device

**PREMIUM version:** Bundled free for owners of a Merging Network Interface

## Installing the Merging Virtual Audio Device

### Prerequisites

The Merging **Virtual Audio Device** driver can be installed as a stand-alone driver, at least one Network hardware RAVENNA or AES67 compatible is required for the Driver to be operational.

### OS

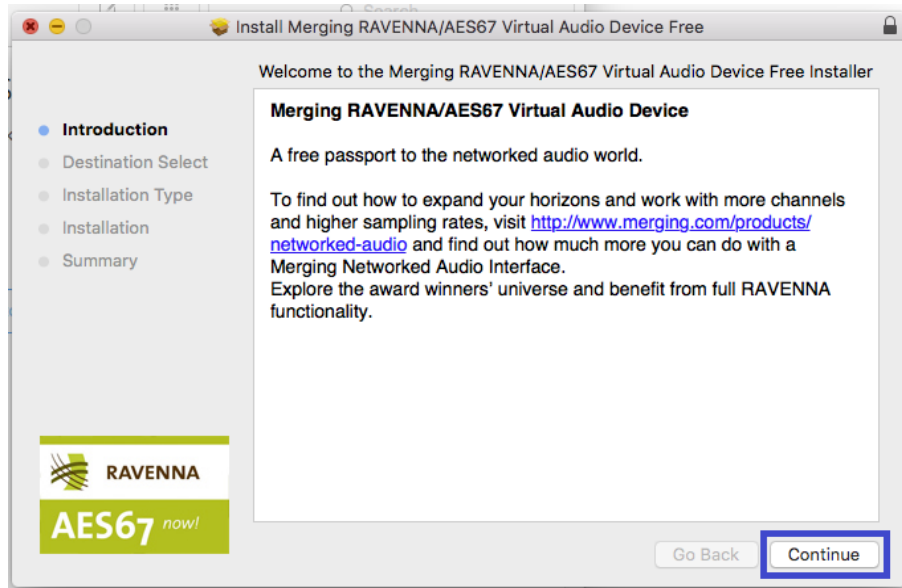

Refer to the System Requirements above

### Installation Procedure

1. Download the Merging **Virtual Audio Device** Installer for MAC.  
<http://www.merging.com/products/networked-audio/downloads>
2. Open the Merging\_RAVENNA\_AES67\_VAD\_Standard\_Installer.dmg file and mouse click on it

3. Click on Continue to proceed with the installation.

4. Follow the installer instructions. You will be prompted to enter the Administrator password
5. When the install is complete it will display Successful. Click Close to exit.
6. Restart the MAC after the driver installation is completed.

**IMPORTANT:**

If the Driver is not well authorized a warning should be displayed on the Driver VAD Panel

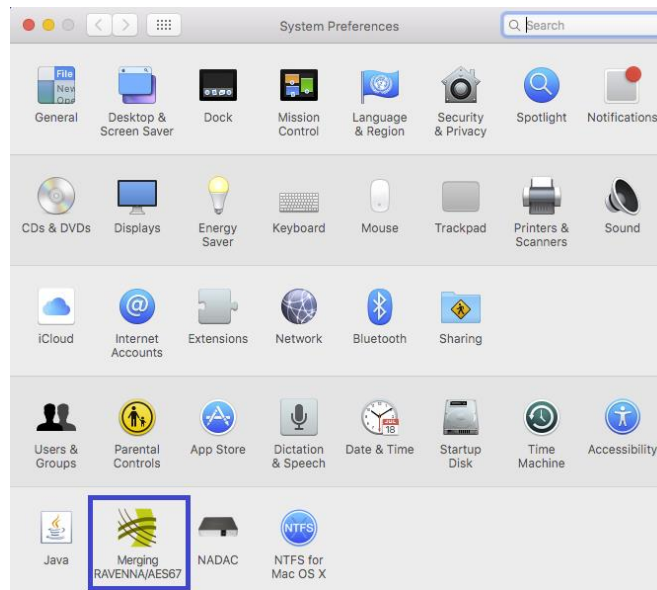

The OS requires you to immediately authorized the Driver by going to the System Preferences>Security& Privacy and Allow the driver if it is listed in the General Settings under “Software Developer”. The “ALLOW” button might not be clickable in remote access please connect a mouse locally and have a local access to the mac in order to select the “Allow” option. There is a possibility that this message does not show, that depends on how the macOS update was performed.

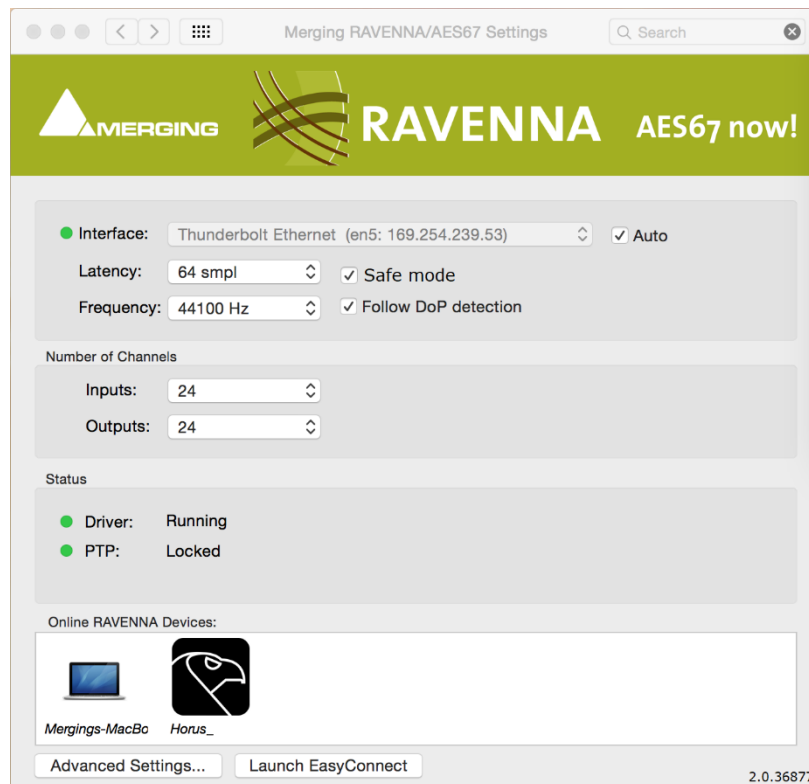

**Important:** As of the latest VAD, the installer no longer includes ANEMAN that is the Merging Audio Network MANager that will allow you to connect, monitor, and manage your networked audio devices.

Please download and install the latest ANEMAN in order to manage and monitor your AoIP devices from [www.aneman.net/#download](http://www.aneman.net/#download)

7. Go into MAC System Preferences, in Other open the Merging RAVENNA icon.

8. Configure the **Virtual Audio Device Settings**:

**Interface:**

Lists all available network ports. Select the network port the Network Interface is connected to.

- Gray: No interface or interface not properly configured, preventing driver to run
- Green: Driver properly running and Interface at 1Gb

- Yellow: Interface at 100Mb
- Red: Potential security issue

**Latency:**

Fixed at 48 samples for AES 67 compliance (Standard)

6\*, 12\*, 32\*, 48, 64, 128, 256 samples (Premium)

*\* with version above 2.0.37746.dmg*

*Supported Host Framing: 48 - 64 - 128 - 256 samples*

**Safe Mode:**

Depending of the configuration in place enabling this mode will ease up the play engine and could prevent some clicks from occurring

**Follow DoP Mode:**

Identifies if the data stream provided by the application is DoP in that case the VAD is reconfigured in DSD

**Frequency:**

Standard: Fixed at 44.1kHz or 48kHz

Premium: 44.1/48kHz, 88.2/96kHz, 176.4/192kHz, 352.4/384 kHz, DSD64, DSD128, DSD256

**Number of Channels:**

Inputs: • 0,2,8,16,32,40,48,56,64 (Premium goes up to 128)

Outputs • 0,2,8,16,32,40,48,56,64 (Premium goes up to 128)

**Status**

- Driver:
  - Gray: Driver stuck
  - Green: Driver properly running
  - Red: Potential security issue
- PTP\*:
  - Green: PTP locked
  - Yellow: PTP locking
  - Red blinking: PTP unlocked

*\* PTP support for any domain (not only 0) is supported with VAD premium version 2.0.37746.dmg and above*

**Online RAVENNA Devices:**

The panel shows an icon for each RAVENNA device online.

- Clicking on the computer icon opens the Advanced Settings RAVENNA pages

- Clicking on the RAVENNA/AES67 Network Hardware icon opens the web browser and loads the Remote Access web pages.

**Advanced Settings:**

Will open the Advanced Settings pages, this can be useful in order to connect 3<sup>rd</sup> party hardware IO to the VAD. Refer to our Advanced Settings Guide for more details.

<http://www.merging.com/uploads/assets/Installers/ravenna/Merging%20Advanced%20Settings%20guide.pdf>

**Launch ANEMAN:**

Please first download and install the latest ANEMAN from: [www.aneman.net/#download](http://www.aneman.net/#download)

Will open ANEMAN an Audio NETwork MANager, that will allow you to connect, monitor, and manage your networked audio devices.

Refer to the ANEMAN User Guide installed along the VAD for all details

*Note: MERGING+ANUBIS is supported as of ANEMAN v1.1.7 build 39648 and higher*

9. Configure the application you wish to use (DAW) so that the I/O connections use the **Virtual Audio Device**

## Input or Outputs connections

**Virtual Audio Device Standard:**

Users should refer to the **Configure Merging and AES67 devices guide** for more details

<http://www.merging.com/products/networked-audio/downloads>

This guide should also be installed along with your **Virtual Audio Device** driver

**Virtual Audio Device Premium:**

Users can use ANEMAN or RAVENNA Easy Connect installed along with the Device Driver to perform their IO connections. Refer to the ANEMAN user manual or the Easy Connect guide, installed along the VAD.

## Remote MIDI Pre control (for Premium users only)

The Remote PreAmp control are available only with the Virtual Audio Device **Premium** version

### Pro Tools on Mac

Horus / Hapi / Anubis analog preamps can be controlled directly from within Avid Pro Tools running on a Mac. (using Virtual Audio Device Premium). In order to set Pro Tools up for Horus / Hapi / Anubis preamp control follow this procedure:

1. Check the Horus / Hapi / Anubis firmware version and update if necessary, to the latest version.
2. Connect Horus / Hapi / Anubis to the system running Pro Tools through the Ethernet port.

### Within Pro Tools

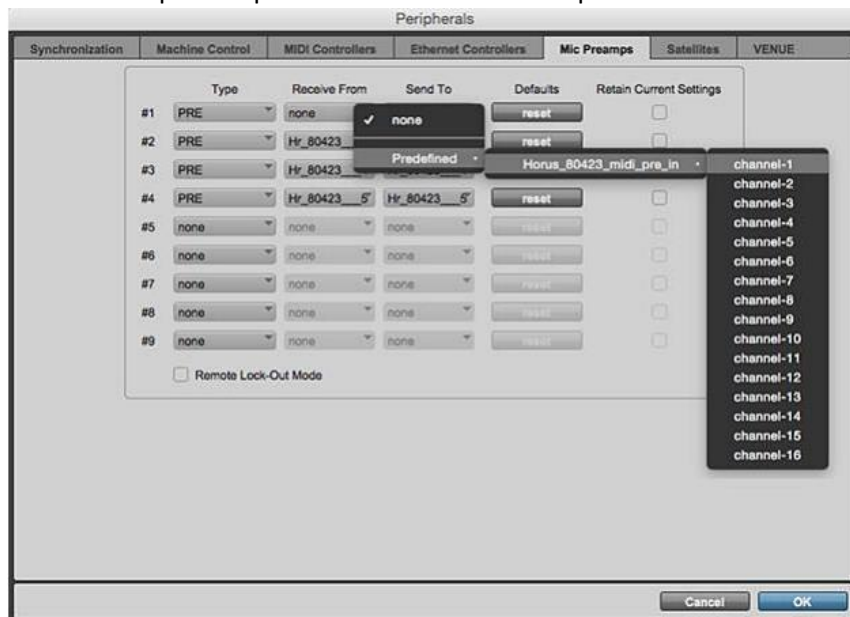

3. Launch Pro Tools and configure to work with RAVENNA Core Audio I/O.
4. Open Pro Tools Setup>MIDI>Input Devices...

Mac MIDI Studio Panel

5. Enable the Merging RAVENNA interface (Horus, Hapi or Anubis).
6. Open Pro Tools>Setup>Peripherals Settings.
7. In the Peripherals panel select the Mic Preamps tab:

Peripherals panel - Mic Preamps tab

8. Select in order:

**Type** PRE  
**Receive From** From Horus\_80xxx\_midi\_pre\_in (or Anubis\_65XXXX\_midi\_pre\_in)  
**Send To** Horus\_80xxx\_midi\_pre\_out (or Anubis\_65XXXX\_midi\_pre\_out)

Note:

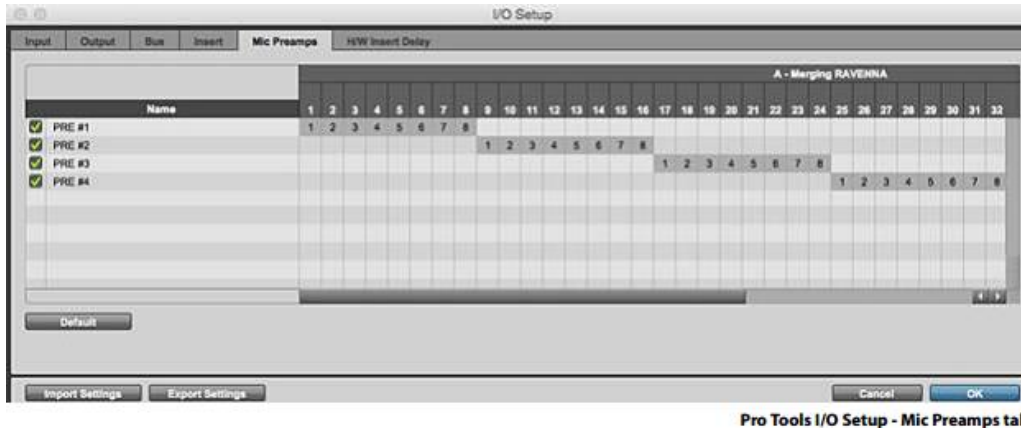

- For the first AD module Receive From > Channel 1 and Send To Channel 1 must be set (typical: Anubis)
- For the second AD module Receive From > Channel 2 and Send To Channel 2 must be set.
- For the third AD module Receive From > Channel 3 and Send To Channel 3 must be set.
- For the fourth AD module Receive From > Channel 4 and Send To Channel 4 must be set

Warning: Horus and Hapi users must verify the order of their AD modules as the Channel numbering is based on slot position. Anubis users will typically receive from Channel 1 to Channel 1

9. Click on OK to close the Peripherals panel.

**Within Pro Tools**

10. Open the Pro Tools **I/O Setup** panel:

Pro Tools I/O Setup - Mic Preamps tab

11. In the **Mic Preamps** tab enable **Horus PRE #1** etc. check the boxes to the left of the entries.

12. Click on OK to close the **I/O Setup** panel.

The Horus, Hapi and Anubis Preamp controls will be available within Pro Tools when the Horus / Hapi / Anubis Preamps are connected to the Pro Tools Mixer Strip Inputs.

Note: Information about the MIDI-Din are available within the RAVENNA Network Guide.

<https://www.merging.com/products/interfaces/downloads>

## Troubleshooting

### RAVENNA Core Audio Settings

For proper driver functioning check that the RAVENNA Core Audio panel is shown with all LEDs showing green.

*Note: When the interface is shown as available (yellow or green led), the system could take some time to configure the interface (several seconds).*

### Latency and Clicks

Audible pops and clicks can occur when using some third-party audio interfaces or depending on the speed of the processor. To avoid this problem increase the Hardware Buffer size for the device. You should aim for the lowest possible I/O buffer size value that doesn't introduce clicks, pops, and crackles in the audio. If pops and clicks persists try reducing the IO count in the VAD panel.

### Security Firewall

The Mac Firewall can block RAVENNA/AES67 communication, we recommend that you turn it off

### Privacy

We recommend that you disable the Parental control as well

### Uninstalling the Merging Virtual Audio Device:

Use the uninstaller to remove the Merging Virtual Audio Device installation cleanly
